

I wanted to express my full support and concurrence with the comment filed by the American Radio Relay League in response to Docket 03-104. After careful scrutiny, I believe their comments reflect the best science presented on this item, and hence the state of Power Line Carrier/BPL technology cannot provide the needed safeguards to existing licensed users of the 2-80 MHz spectrum. I think that it would be very ill advised to approve any relaxation of Part 15 standards at this time as it would be contrary to the greater public interest.
